

1 Utilizzo / Application

PRODOTTO da Gruppo Stamplast,
 Il gocciolatoio TOP protegge i bordi di balconi e terrazze costantemente esposti alle intemperie. Permette di incanalare l'acqua lontano dal muro evitando la corrosione della facciata. Differisce dal modello NOR per la presenza di fori ad asola per l'evacuazione di eventuale acqua filtrata sotto la piastrella.

MANUFACTURED by Gruppo Stamplast,
 this balcony profile has a drip lip providing a clean edge finish and protection for the exposed edges against weathering and decay. Different of the NOR type, the slotted holes even help evacuation of the water eventually filtered beneath the tiles.
